

# Waterflow Model?

Online ticket booking system.

## Communication.

- \* Getting details about the target audience through surveys
- \* Researching about transport companies to get a better idea

## Planning

- \* Estimating the total budget of the model.
- \* Having a rough deadline for the prototype completion.

## Modeling

- \* Decide upon the technology stack to be used for the proposed software.
- \* Work closely with designers to design a UI

## Construction

- \* According to the model, get started with the actual code part
- \* Test, debug and improve/optimize the code.

## Deployment

- \* Get feedback from numerous source to have multiple perspective
- \* Finally release the model and make it reach the masses through extensive marketing.

## STUDENT MANAGEMENT SYSTEM.

### ① Communication:-

→ Gathering information like number of students, institutes, student details, faculty and mass details, grades, curriculum and other necessary requirements

### ② Planning:-

→ Predicting and analysing, what the system will do, and be used for, different requirements/needs of students, number of people required for project, etc.

### ③ Modelling:-

→ Structure of the system, deciding the tech stack for front-end and back-end, etc.

### ④ Coding:-

→ Coding frontend and backend followed by unit testing.

→ Integrating both of them properly and complete system testing.

→ Fixing bugs, debugging errors and testing on large scale.

### ⑤ Deployment:-

→ Making it available publicly to students and asking for constant feedback to improve user experience.
